The miniuol beamer theme

`miniuol` is a minimal theme for the \LaTeX beamer document class that emphasizes simplicity, legibility and elegance.

It has been forked from the *Manc* theme (available at <https://github.com/ibab/beamertheme-manc>), with modifications to fit my taste.

For instance, *Manc* used the Fira typeface family throughout; that has been replaced with a combination of Inter, Iosevka, and Iosevka Slab.

Block

This is a simple block created using the `block` environment.

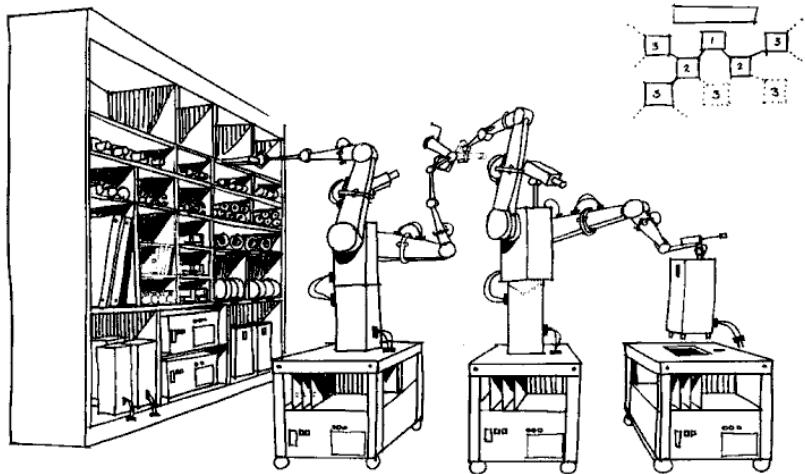

Example block

This is an example block created using the `exampleblock` environment.

Manc replaces the default beamer blocks with boxes from the `tcolorbox` package. These can be configured in much more detail than a `beamercolorbox`

Use boxes sparingly to highlight specific pieces of information (theorems, formulas, commands, ...) that you want your audience to remember.¹

¹Add footnotes by using `\footnote[frame]{...}`

Here is some R code:

```
# Plot using R-base  
x <- runif(10)  
y <- 2 * x + rnorm(10)  
plot(x, y)
```

A slide with some maths

Here a slide with some maths:

$$y = a + \beta x + \varepsilon$$

Thank you.
